- [Accessing Addon](#)

Configuring Addon

To configure Configuration Module to make it visible in sidenav menu you need to extend **Manifest** (JSON)

Configuration Helper

Description

Helper function for configurators. Need layouts to use in the dashboard.

Version

1.9.0

Status

Stable

Status

General

☐ Is Primary

Manifest

```
1 {
2   "date": "2025-06-13",
3   "name": "Configuration Helper",
4   "version": "1.9.0",
5   "settings": {
6     "ui": {
7       "index": "/api/storage/workflows/com/finmars/standard-workflow-interface/pipeline/index.html",
8       "url_type": "relative_url",
9       "sidenav_label": "Import From Excel",
10      "is_shown_in_sidenav": true
11     }
12   },
13   "description": "Helper function for configurators. Need layouts to use in the dashboard.",
14   "dependencies": [],
15   "configuration_code": "com.finmars.config-helper"
16 }
```

You need to add **settings** property to root of your Manifest (JSON)

In settings you need to add **ui** property

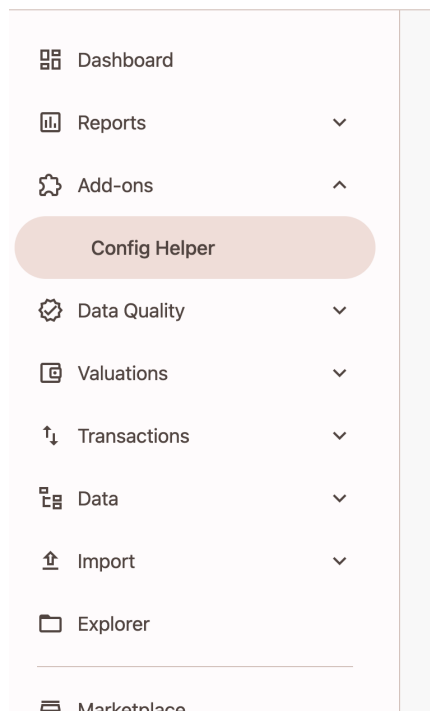

index - main URL that will be passed to <iframe> tag. if **url_type** is "relative_url" then it will be calculated in following pattern:

```
window.location.origin + '/' + realmCode + '/' + spaceCode +  
configuration.manifest.settings.ui.index;
```

If **url_type** is "absolute_url" then you can provide full URL e.g. <https://example.com/widget>

sidenav_label - optional field, if not provided then configuration.name will be in use

is_shown_in_sidenav - boolean field, shows if module should be visible in Sidenav Menu in "Addons" section

Example of manifest.json

```
{
  "date": "2025-06-13",
  "name": "Configuration Helper",
  "version": "1.9.0",
  "settings": {
    "ui": {
      "index": "/api/storage/workflows/com/finmars/standard-workflow-
interface/pipeline/index.html",
      "url_type": "relative_url",
      "sidenav_label": "Import from Excel",
      "is_shown_in_sidenav": true
    }
  }
}
```

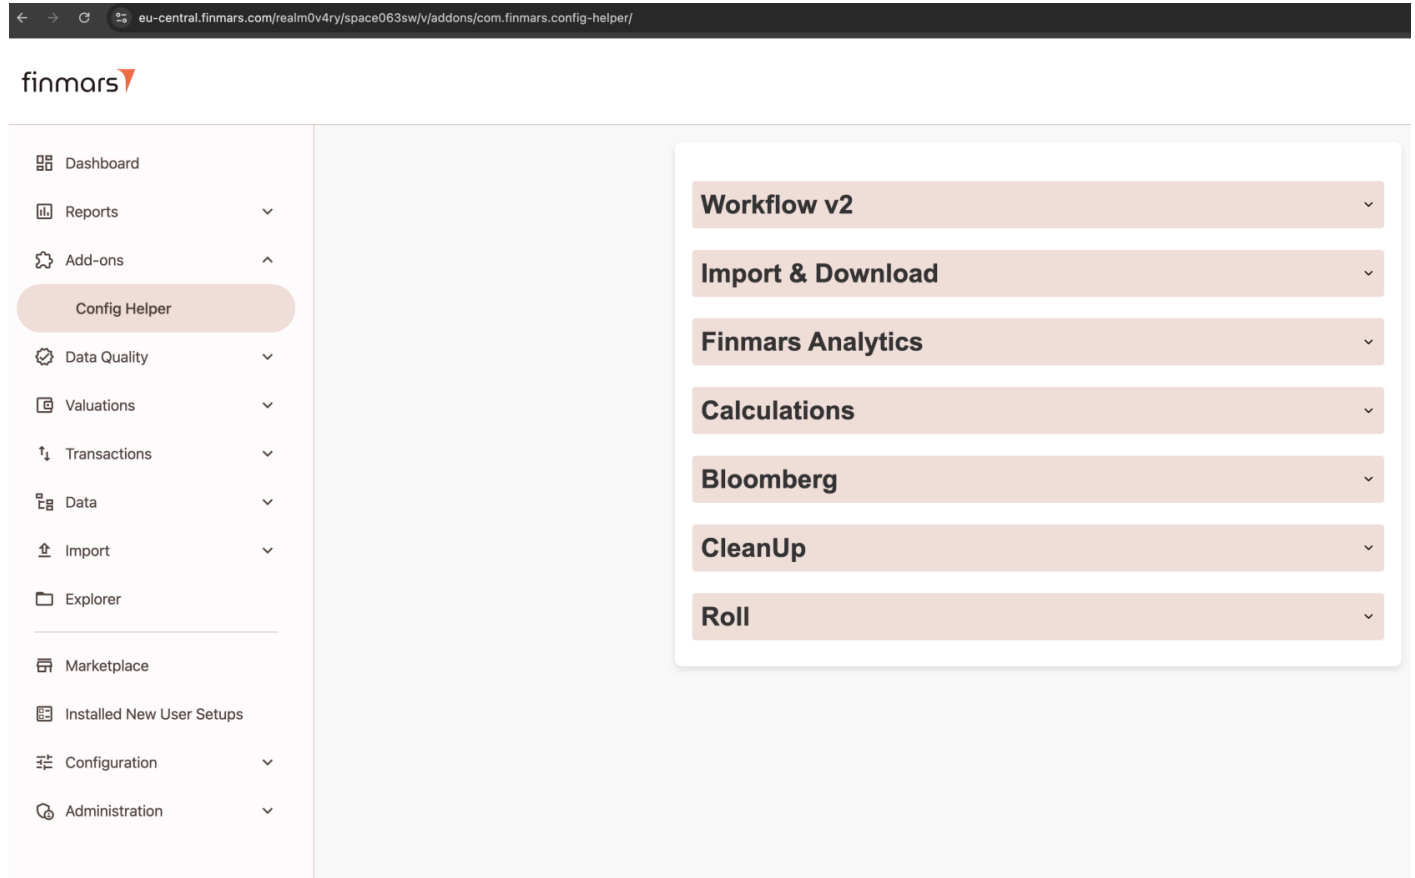

```
},  
  "description": "Helper function for configurators. Need layouts to use in the dashboard.",  
  "dependencies": [],  
  "configuration_code": "com.finmars.config-helper"  
}
```

You also able to query Configurations (Addons) with JSON filtering

[http://0.0.0.0:8000/realm00000/space00000/api/v1/configuration/configuration/?manifest.settings.u
i.is_shown_in_sidenav=true](http://0.0.0.0:8000/realm00000/space00000/api/v1/configuration/configuration/?manifest.settings.ui.is_shown_in_sidenav=true)

Accessing Addon

If Manifest (JSON) was properly configured in Configuration Module, then it should be visible in Sidenav Menu under Addons Section

Otherwise, you can find your addon on Absolute Link

<https://finmars.example.com/realms00000/space00000/v/addons/com.finmars.example>
