Generate and use access token

1. Generate access token

   Go to the URL:`https://<domain_name>/<realm_code>/<space_code>/api/v1/auth-tokens/personal-access-token/create-token/`
   Fill out the form and click **POST**.
   Copy the **"access_token"** field from the response.
2. Use examples

```
curl -H "Authorization: Bearer <access_token>" \
     https://<domain_name>/<realm_code>/<space_code>/api/v1/...
```

```
import requests

url = "https://<domain_name>/<realm_code>/<space_code>/api/v1/..."
headers = {
    "Authorization": "Bearer <access_token>"
}

response = requests.get(url, headers=headers)

if response.status_code == 200:
    print("Response:", response.json())
else:
    print("Error:", response.status_code, response.text)
```
