

How to Create Local Combined New User Setup

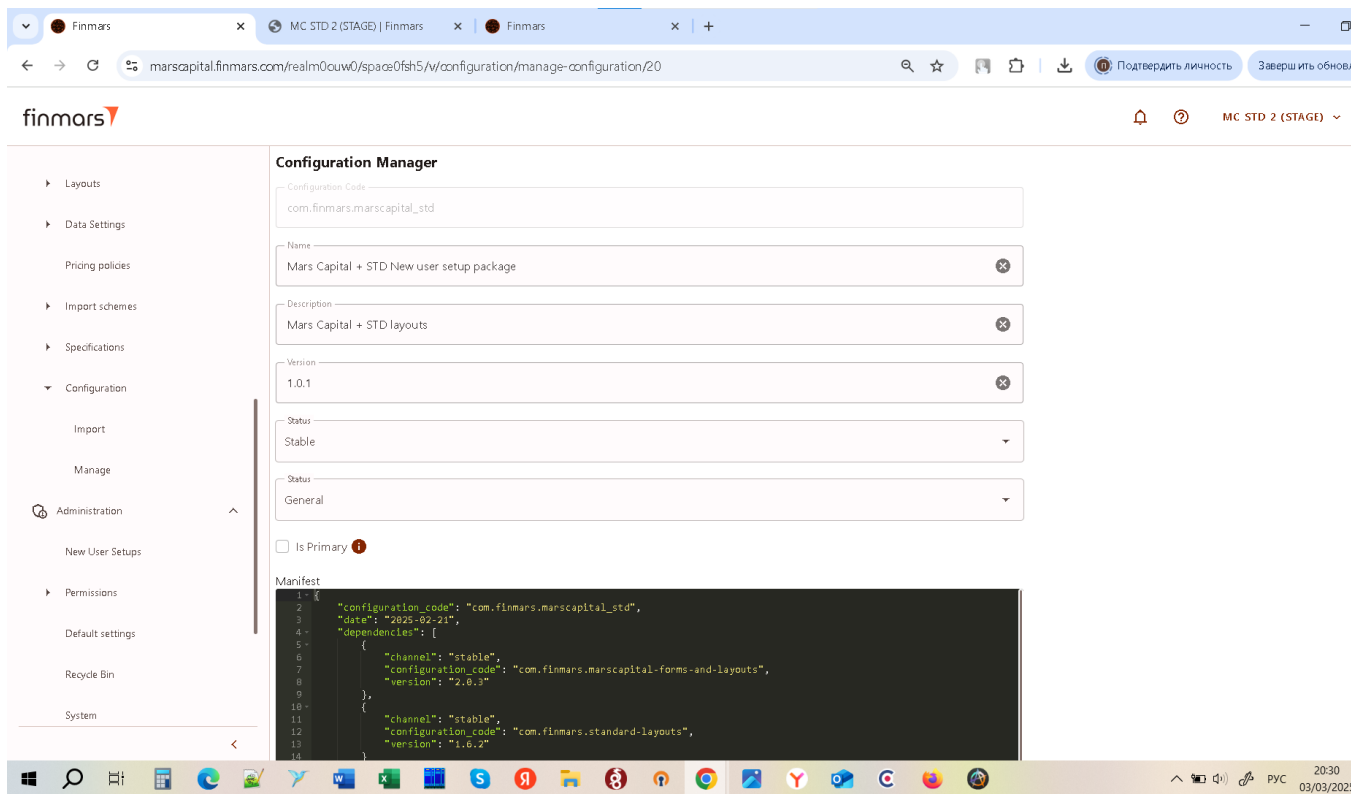

Prerequisites

We assume you have all prerequisites you may need, including:

1. If needed: the VPN is configured to access the Finmars resources
2. If needed: access to the Virtual Machine to work with the sensitive information
3. Must have: registered in Finmars in the needed region environment (self-registered or registered by Finmars)
4. Must have: having permissions set to allow continue with the Action in the Guide
5. Must have: all needed layouts already have been pushed to Marketplace

Creating Local Combined New User Setup

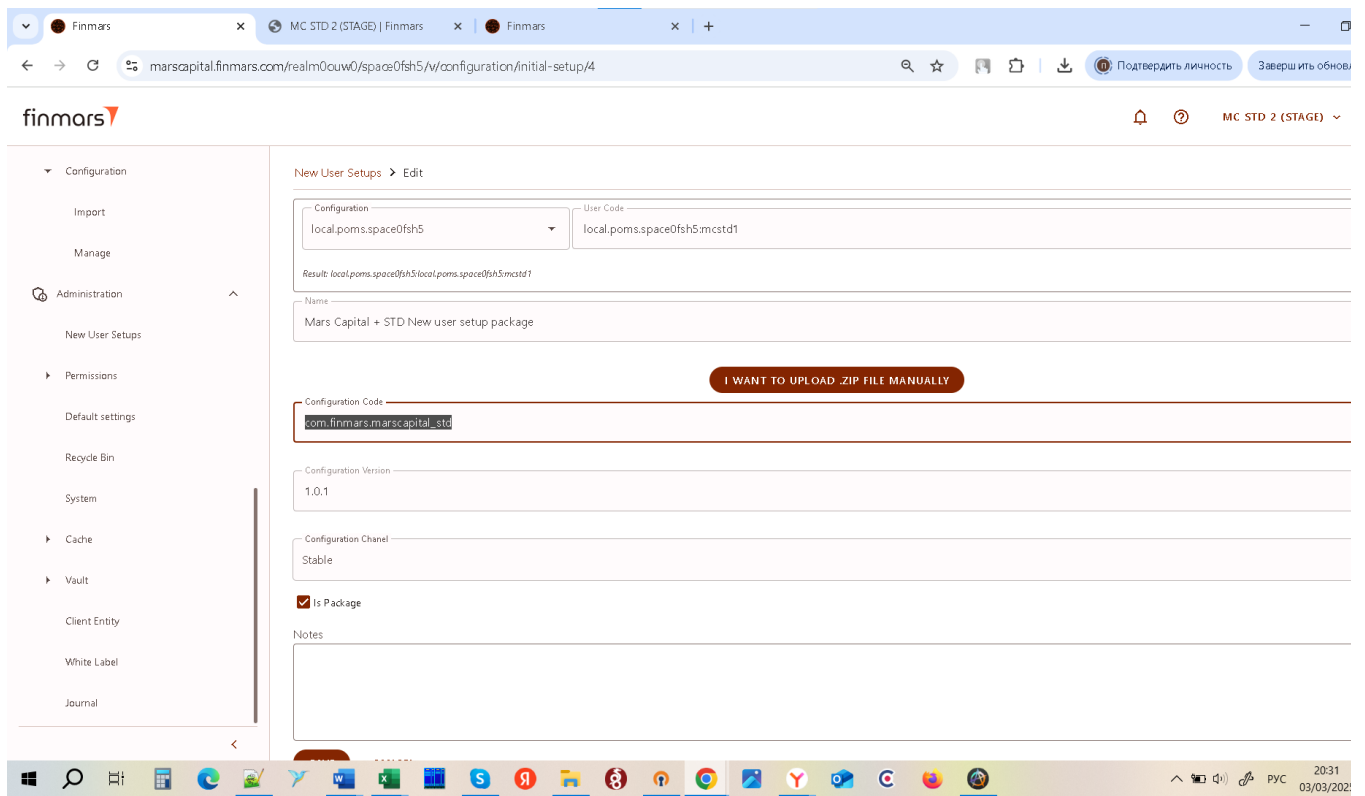

1. Create and push to Marketplace not a module, but a package containing all of these layout modules in dependencies list at once ([How to Create a New Module/Package in the Marketplace](#) local version does not need push to Marketplace)

2. Use this code as an example to create a package.

```
{
  "configuration_code": "com.finmars.marscapital_std",
  "date": "2025-02-21",
  "dependencies": [
    {
      "channel": "stable",
      "configuration_code": "com.finmars.marscapital-forms-and-layouts",
      "version": "2.0.3"
    },
    {
      "channel": "stable",
      "configuration_code": "com.finmars.standard-layouts",
      "version": "1.6.2"
    }
  ],
  "description": "",
  "name": "Mars Capital + STD New user setup package",
  "version": "1.0.1"
}
```

3. Finally, create a New user setup using not a file with the layouts of one of the modules, but a link to a registered package with two layout modules
