- data_transformer.ipynb** - main jupyter python script that works with Finmars REST API to calculate all metrics and export results as .json into same folder
- experts.json** - meta file with all information about expert and its portfolios and closing periods, it used in **data_transformer.ipynb**
- expert_portfolios.json** - result file that used in Dashboard Layout to output all the calculation to User Interface
- expert_N_result.json** - result file of single expert, tmp file, used to be concatenated into single result file **data_transformer.ipynb**
- experts_mock.json** - example file of expected structure in experts.json
- experts_portfolios_mock** - example file of expected result of **data_transformer.ipynb**
- index.html** - actual dashboard page that showed in Finmars Dashboard Layout
