

Get Instruments in GraphQL

This query returns a list of instruments with basic fields and instrument type.

GraphQL Query

```
query GetInstrumentList {
  instrument(
    pagination: {
      limit: 20
      offset: 0
    }
  ) {
    id
    user_code
    name
    maturity_date
    instrument_type {
      id
      user_code
      name
    }
  }
}
```

Python Example

```
import requests

url = "https://<domain_name>/<realm_code>/<space_code>/graphql/"

headers = {
    "Authorization": "Bearer <access_token>",
    "Content-Type": "application/json"
}

payload = {
    "query": """
query GetInstrumentList {
  instrument(
    pagination: {
      limit: 20
      offset: 0
    }
  ) {
    id
    user_code
    name
    maturity_date
    instrument_type {
      id
      user_code
      name
    }
  }
}
"""
}

response = requests.post(url, json=payload, headers=headers)
print(response.json())
```

Notes

- Field names must match the schema (`maturity_date`, `instrument_type`, etc.)
 - Add filters the same way as in `currency_history` when needed (Previous documentation page)
-
