

# Doing Backup

## 1. Open Finmars Setup web interface in your Web Browser

Go to [http://Your\\_Public\\_IP:8888](http://Your_Public_IP:8888) (for example <http://127.0.0.1:8888> for local instalation)

### ✔ Setup Complete

You can now use the [Finmars Platform](#).

#### 🔧 Management Tools

Use these tools to manage your Finmars installation:

- [Version Management](#) - Update component versions and restart containers
- [Backup & Restore](#) - Create, restore, and manage system backups
- [Logs](#) - View and download logs from all Docker services
- [Users](#) - Add new users to the Keycloak realm

[support@finmars.com](mailto:support@finmars.com) | [Documentation](#) | [Github](#)

## 2. Open "Backup & Restore" page

[← Back to Setup](#)

### Backup & Restore

Create, restore, and manage backups of your Finmars Community Edition installation. Backups include configuration files, databases, and application data.

#### 📁 Create New Backup

[Create Backup](#)

#### 📁 Available Backups

No backups found

Create your first backup to get started with protecting your Finmars installation.

#### 📄 Backup Information

- **What's included:** Configuration files (.env, docker-compose.yml), databases, Keycloak data, Nginx configs, and application data
- **What's NOT included:** Docker images, logs, and temporary files
- **Storage:** Backups are stored in the /backups directory
- **Restore process:** Click the "Restore" button to restore a backup. Containers will be stopped during restore and restarted automatically
- **Safety:** Always test backups in a non-production environment first
- **Data Loss Warning:** Restoring a backup will permanently replace all current data with the backup data
