

Creating a user and adding access to the space

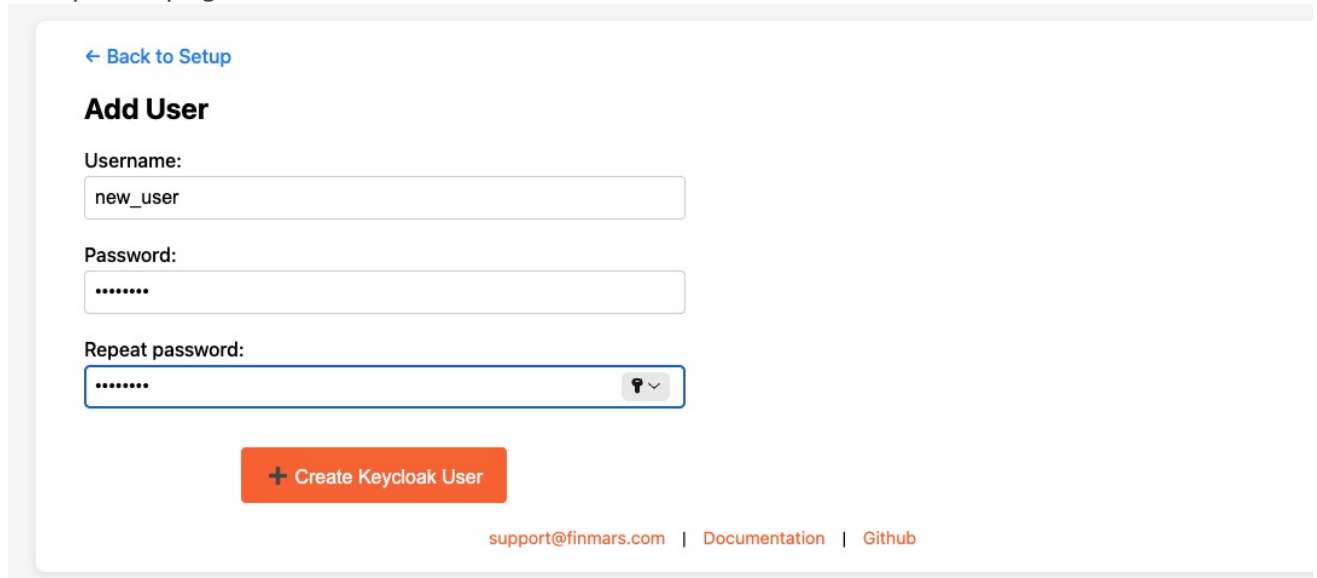

1. Creating new user

There are two ways to create a new user:

- CLI
by command:

```
make add-user USERNAME=<user-name> PASSWORD=<password>
```

- Setup web page

The screenshot shows a web interface for adding a new user. At the top left, there is a blue link labeled "← Back to Setup". Below this is the heading "Add User". The form contains three input fields: "Username:" with the text "new_user", "Password:" with masked characters "*****", and "Repeat password:" with masked characters "*****" and a small eye icon to toggle visibility. Below the form is an orange button with a plus icon and the text "Create Keycloak User". At the bottom right, there are links for "support@finmars.com", "Documentation", and "Github".

2. Adding access

Choose certain access policies or select "administrator".
