

Palette Abstraction

- **Overview:**

For each White Label item, a design palette is created—a set of CSS variables that encapsulate the customer's brand colors and styling.

- **Examples:**

- **Base Variables:**

For example, `--p-10: #390b00;` defines a primary color.

- **Component Variables:**

For example, `--on-primary: var(--p-100);` is used to style text or elements placed over the primary color.
