

Process for Implementing a New Palette

- **Palette Creation:**

- A designer develops a new palette based on the customer's branding requirements.
- The palette includes all necessary CSS variables reflecting the desired colors and styles.

- **Exporting the Palette:**

- Once approved, the palette is exported as a CSS file containing the full set of variables.

- **Integration into White Label:**

- **File Upload:** The CSS file is uploaded to the corresponding White Label item.
- **Direct Insertion:** Alternatively, the CSS code can be pasted into the Custom CSS field.
- The system then automatically applies the new variables to all related UI kit components.
